TURTLE MAN PONDERERS.

WHY IS MELBOURNE?

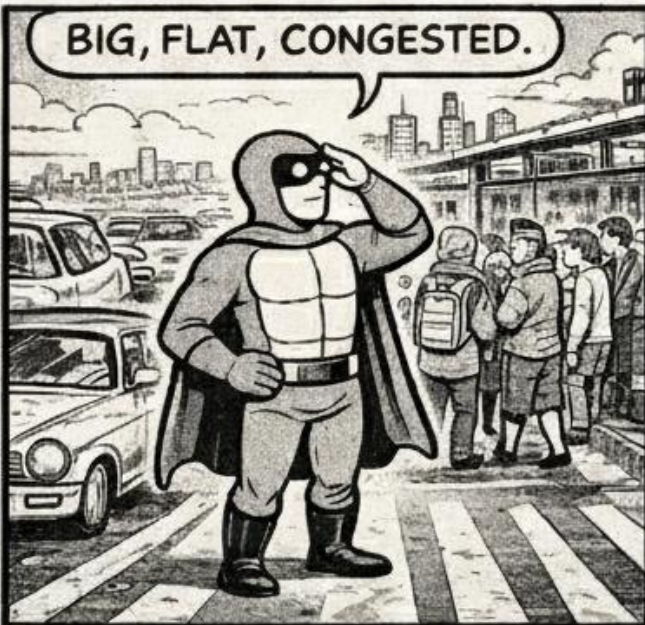

Why do 5.5 million people live in a former swamp and the surrounding scrub?

It's like a European city no one's ever visited...

BIG, FLAT, CONGESTED.

Wet & dry at the same time. Expensive.

TURTLE MAN PONDERERS.

Why Victoria?

VICTORIA

Could have been Williamia if they'd just formed it a little earlier. Catchy name..

Or North Tasmania.

Or South New South Wales,

Or East South Australia,

Or West South Island,

Hmm.

Woo-hoo!

Nah.

This city is named after Lord Melbourne, the former prime minister of England. That guy was preceded by Robert Peel and he was also preceded by The Earl Grey later on. Great names... Peel, Earl Grey. Or just Porky's.

Earl Grey

Great names.. Peel, Earl Grey.

Jeff Kennett introduced a convention that any Victorian premier who serves over 3,000 days in office will be honoured with a statue. Good on ya, Jeff.

THE RENOWNED MELBOURNE CBD WAS DESIGNED BY ROBERT HODDLE, A GENIUS URBAN ARCHITECT...

BY GOD... I'M A GENIUS.

JUDGED BY GLOBAL HR FIRMS WHO HANDLE INTERNATIONAL CEO TRANSFERS

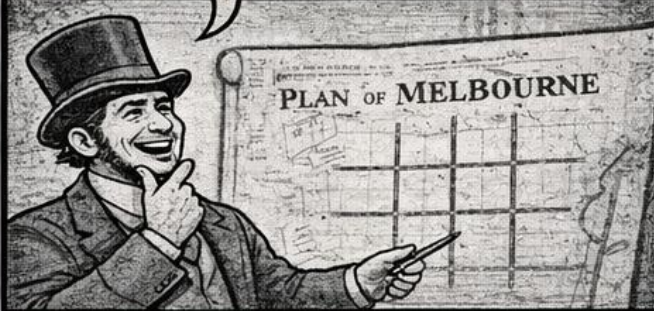

JOLLY GOOD SHOW, MR. HODDLE! THIS IS FUCKING GENIUS!

HA HA. INDEED.

FUCKING AMAZEBALLS, MAN.

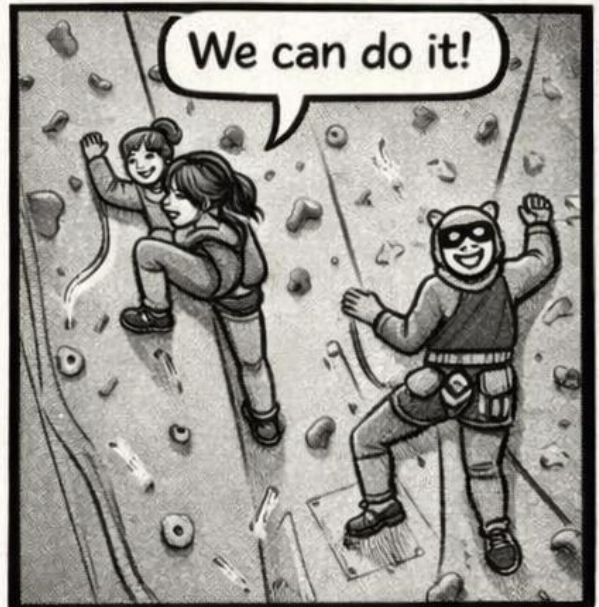

Anthony

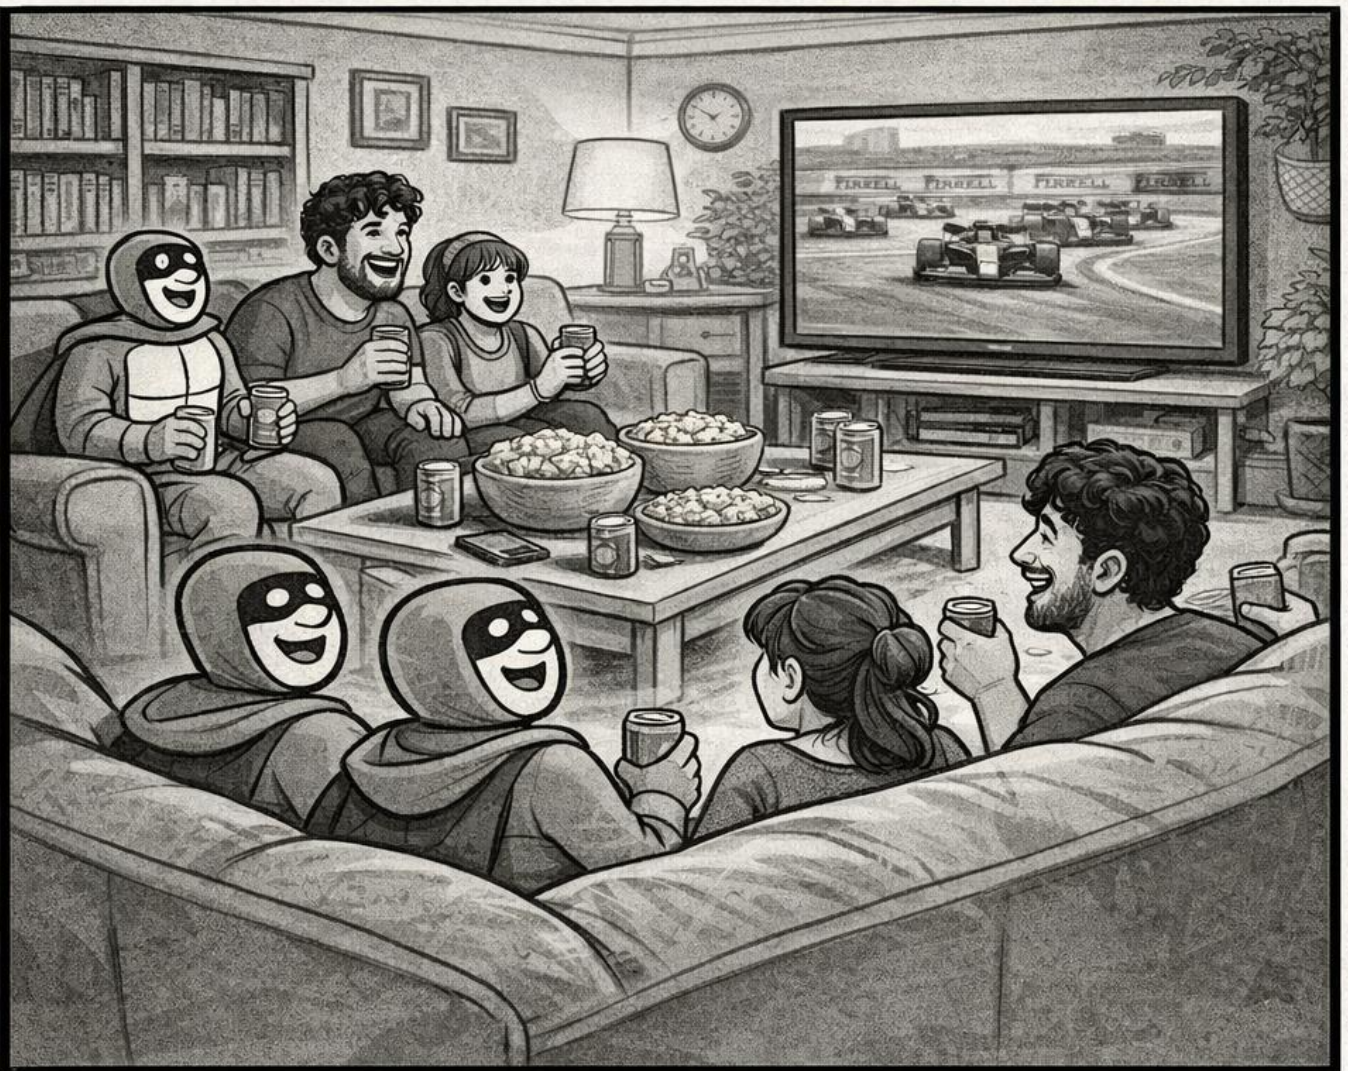

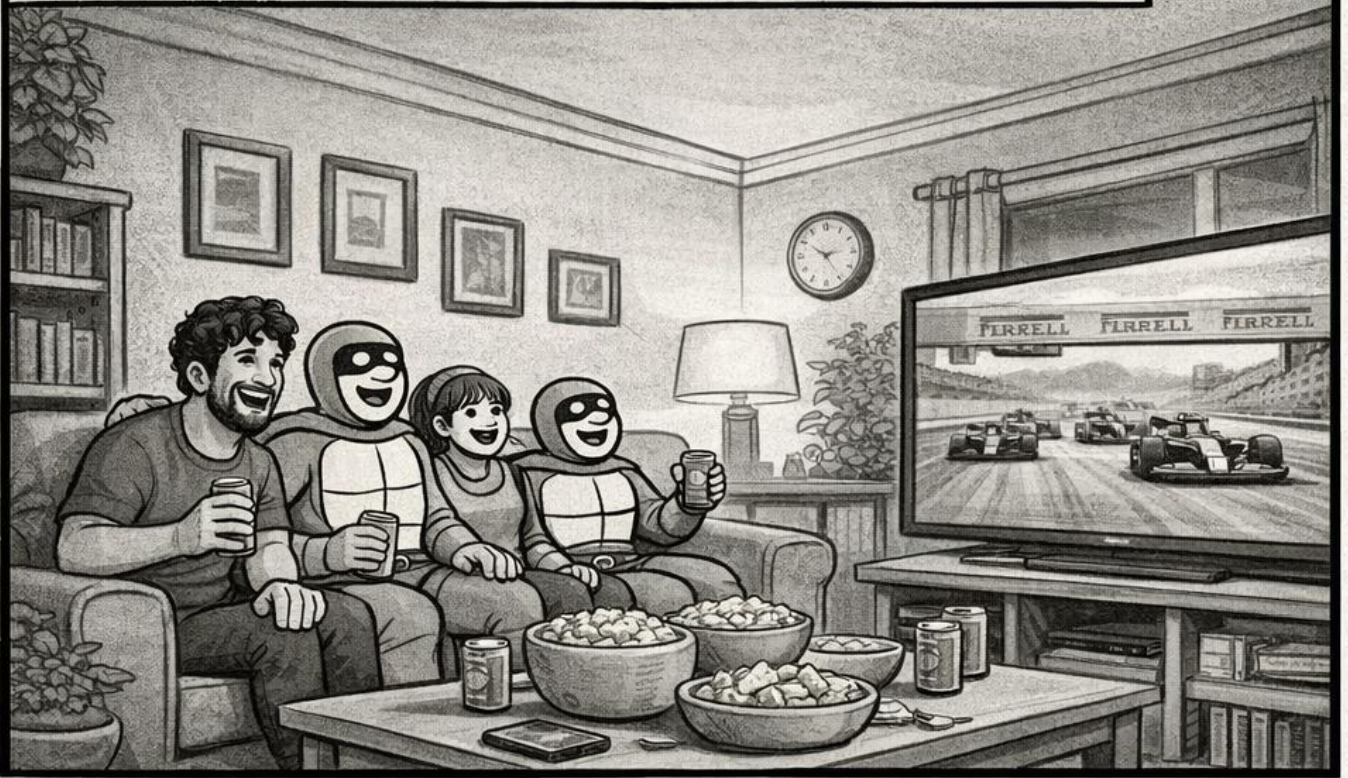

Back at Anthony's place, the team relax and watch the Shanghai F1 qualifying...

Then the other people form up, including tuntegt: all night.

Ugh. Just pretend it doesn't exist...

Eventually he gets up.

Anthony drives them into Melbourne...

Here we are!

Here we are!

...and to their apartment.

We've arrived!

Enjoy!

See you later.

Turtleman and turtleboy take an the airport.

Our Uber is here!

The only football teams I'd go see are
Fitzroy, South Melbourne, Port Melbourne...

But they'd have to do dogs-football
double headers. That is run the
dogs around the oval at half
time.

Doesn't have to be greyhounds,
could be poodles for all I care.

HELLO MY NAME IS ART.

$$P(A | B) = \frac{P(B | A) \times P(A)}{P(B)}$$

This is Bayes' Theorem.

P(A) is the "prior probability" of A.
This is what you believed before seeing B.

(PRIOR →
- before)

P(A) is the "prior probability" of A. This is what you believed before seeing B.

P(A)
(PRIOR - before)

P(B | A) is the "likelihood".
This is how probable B is if A is true.

P(B | A)
(LIKELIHOOD)

P(B) is the **marginal** probability of B. This is the total probability of observing B under all possibilities.

P(B)
(MARGINAL - all possibilities)

P(A | B) is the "posterior". This is what you should believe about A after seeing B.

P(A | B)

$$P(A | B) = \frac{P(B | A) \times P(A)}{P(B)}$$

Altogether, this formula helps you update what you believe about A after you encounter B.

I've seen it but
I don't believe it.
